# *Creating a Question and Answer bot using Azure Bot Service*

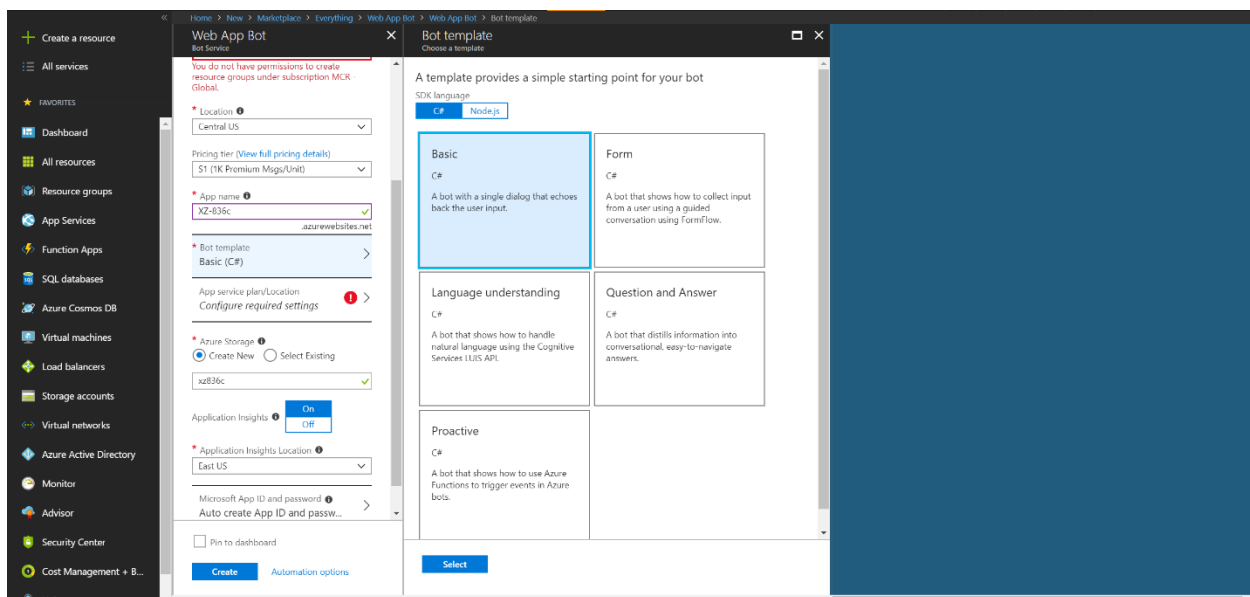

1. Search for Bot service, and select the bot type that suits your situation

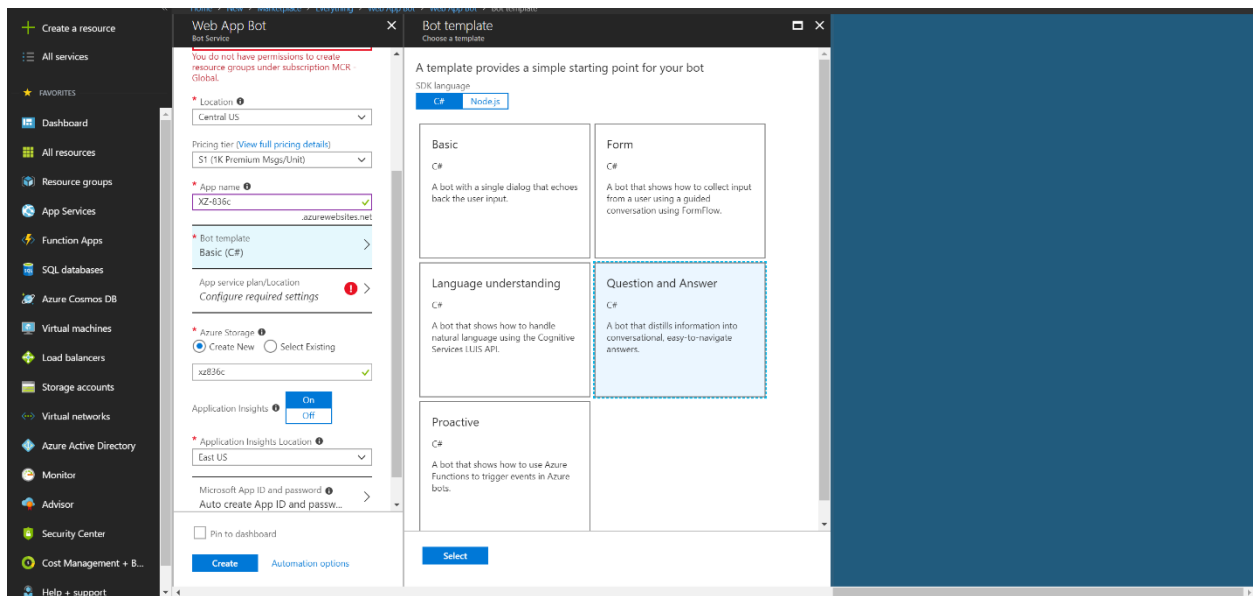

2. Create the bot of your preference

3. Fill in the information needed to create the bot

4. In the bot template select the Question and Answer C# this is showcased in the image below
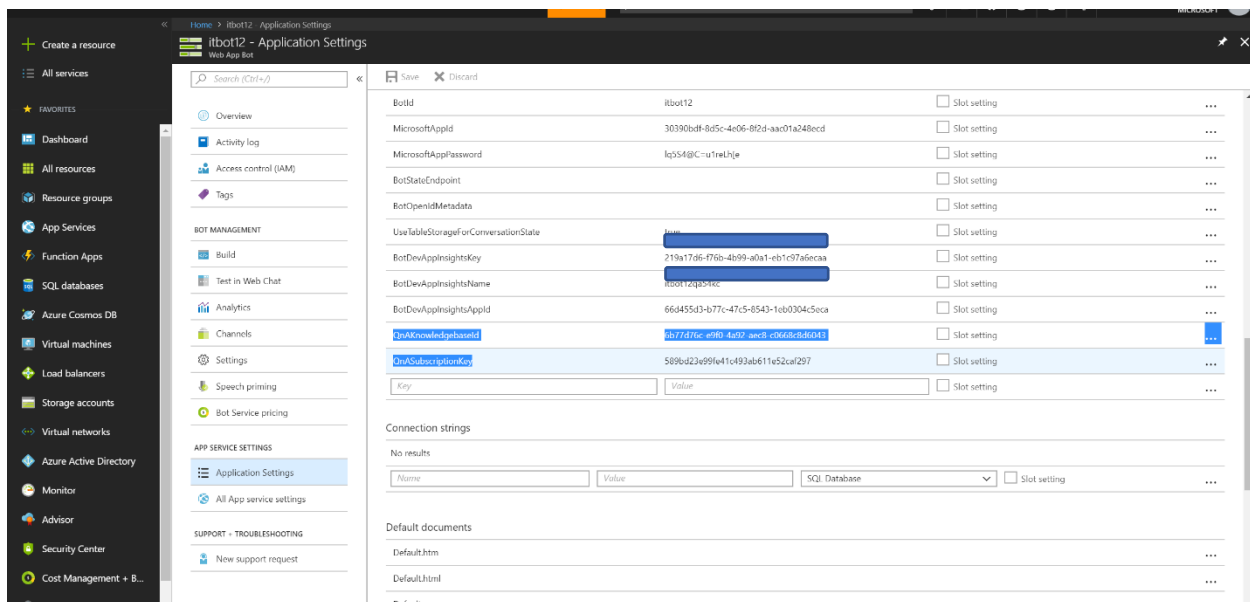

5. Select Question and Answer Template

6. After deployment is done, click on the bot that you've created and select ***Application Settings*** in ***<u>App Service Settings</u>***
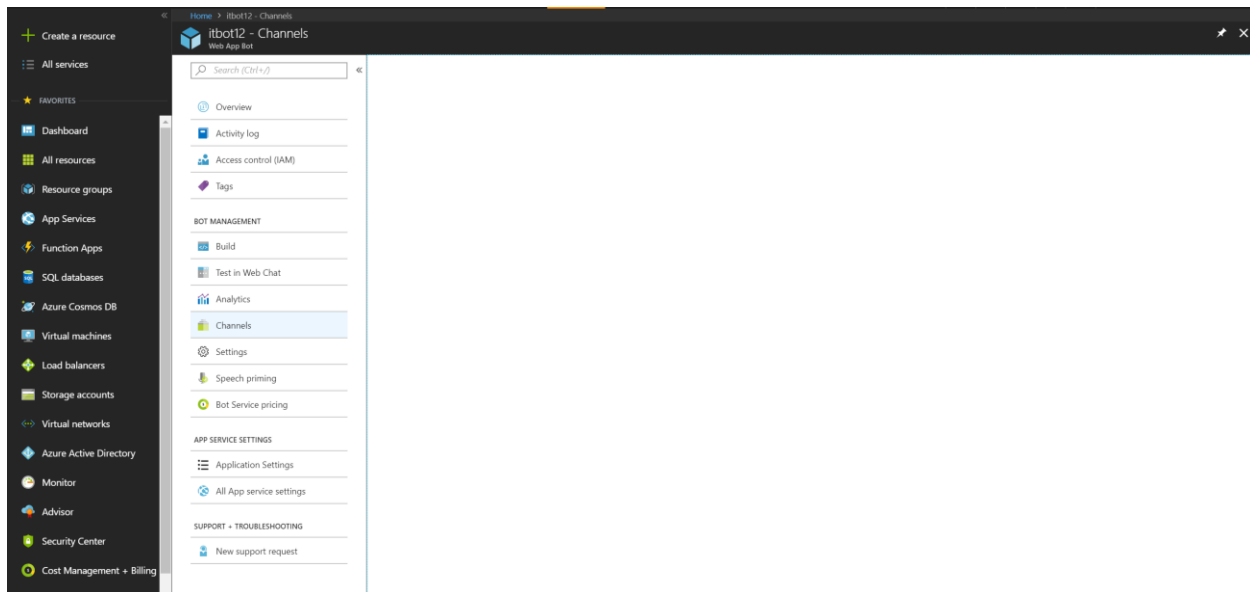

7. You can acquire the Knowledge base (QnA knowledge base ID) and the Subscription Key (QnA Subscription key), once you're done training your knowledge base; press publish and then you'll reach this page. Copy the Knowledge bases and the Subscription key and paste it in the Application

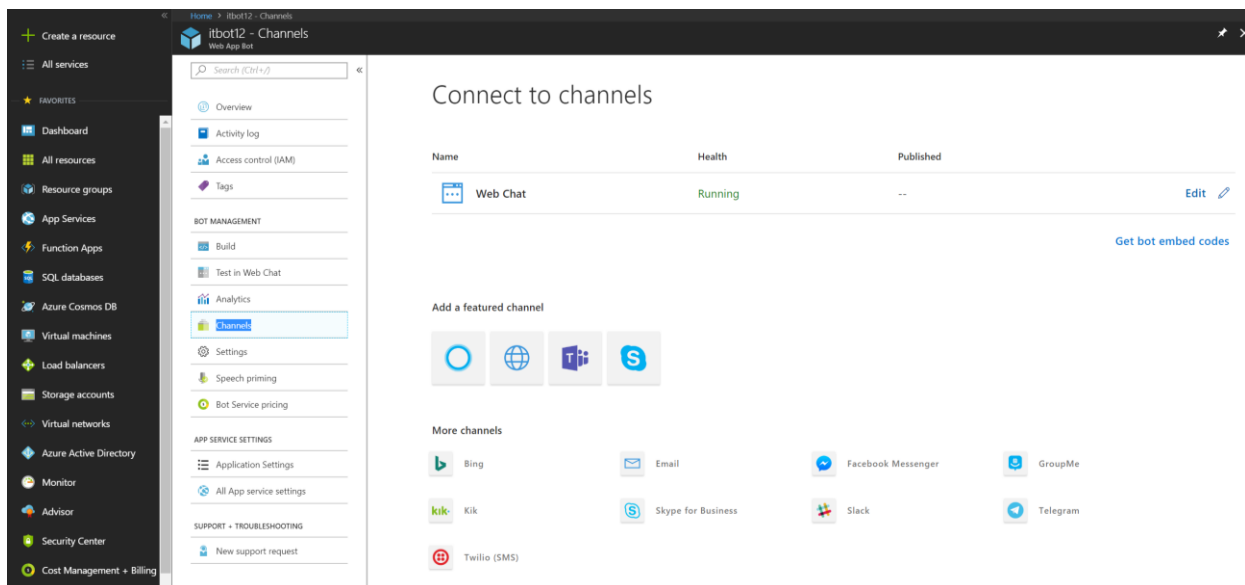

8. Copy and Paste the Subscription key and the subscription ID from the QnA maker Website.
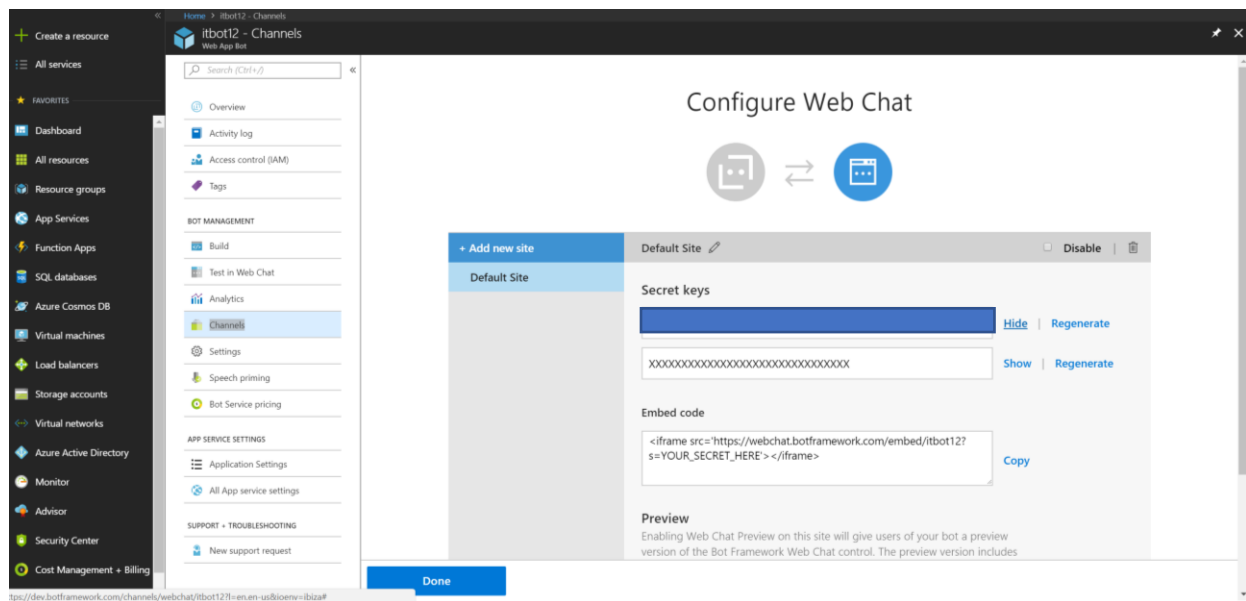

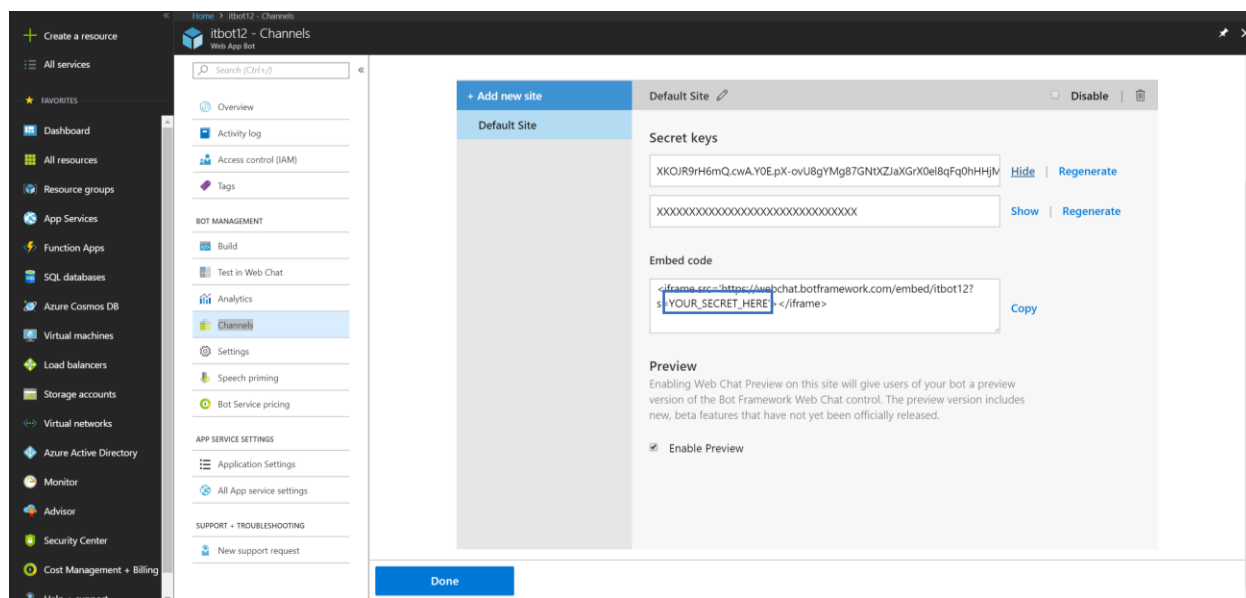

To publish your bot as a web channel.

1. Select Channel.

2. In web chat press on edit

3. In the secret keys section, press on show secret, and copy it

4. Replace **_Your_Secret_Here_** with the secret that you've copied in step number 3.
5. Paste your URL in the Address bar, and test your bot.
